

PET STORE TEST-CASE EXECUTION PROJECT SUMMARY 12/31/2025 7:48 PM

Project: PET STORE TEST-CASE EXECUTION
By sourav QA, 12/31/2025 7:48 PM

The Pet Store Test-Case Execution Project was conducted to validate the functional behavior, usability, and overall stability of the Petstore demo web application (petstore.octoperf.com) using structured manual testing practices and the TestRail test management tool. The project followed a phased testing approach aligned with standard software testing life cycle (STLC) principles. Initially, detailed test planning and setup activities were performed to define the testing environment, scope, strategy, assumptions, and risks. This ensured that the testing activities were well-structured and aligned with the project objectives before execution began.

In the test case design phase, comprehensive functional test cases were created to cover critical user workflows of the application. These included browsing pet categories (Bird, Reptile, Cat, Dog, and Fish), viewing product details, adding products to the shopping cart, updating cart contents, and completing the checkout process. Each test case was designed with clear preconditions, step-by-step actions, and expected results to ensure accurate and repeatable testing.

During the test execution phase, test cases were executed on the actual Petstore web application through TestRail test runs. Each test case was validated by performing the defined steps on the live application and comparing the actual behavior with the expected results. Based on this comparison, test cases were marked as Pass, Fail, Blocked, or Skipped. Execution comments were added to provide clarity on test outcomes and observed behavior.

The execution results indicate that the core functionalities of the Petstore application operate as expected in most scenarios. Category navigation, product browsing, cart operations, and checkout flow were generally stable. Some test cases were marked as failed or blocked due to limitations of the demo environment, application constraints, or temporary accessibility issues, which were documented appropriately.

Overall, this project demonstrates a complete end-to-end manual testing process, including test planning, test design, test execution, and test closure. The use of TestRail provided effective tracking, visibility, and documentation of testing activities. The Pet Store Test-Case Execution Project successfully validates the functional readiness of the application while also showcasing a structured and professional approach to software quality assurance.

Activity

Wednesday, December 31, 2025

Skipped	TC-CP-03: Verify user can complete checkout process successfully	Marked by sourav Q.
Failed	TC-CP-02: Verify checkout page displays order summary correctly	Tested by sourav Q.
Passed	TC-CP-01: Verify user can proceed to checkout from cart	Tested by sourav Q.
Failed	TC-UC-04: Verify cart total updates after decreasing quantity	Tested by sourav Q.
Skipped	TC-UC-03: Verify user can decrease product quantity in cart	Marked by sourav Q.
Passed	TC-UC-02: Verify cart total price updates after increasing quantity	Tested by sourav Q.
Blocked	TC-UC-01: Verify user can increase product quantity in cart	Marked by sourav Q.
Blocked	TC-ATC-06: Verify cart contents persist after navigation	Marked by sourav Q.
Failed	TC-ATC-05: Verify cart item count updates after adding product	Tested by sourav Q.
Failed	TC-ATC-04: Verify user can add multiple products to cart	Tested by sourav Q.
Skipped	TC-ATC-03: Verify product quantity defaults to one when added to cart	Marked by sourav Q.
Passed	TC-ATC-02: Verify cart displays correct product after	Tested by sourav Q.
Passed	TC-ATC-01: Verify user can add a product to cart	Tested by sourav Q.
Blocked	TC-VPD-05: Verify navigation back to category page from product details	Marked by sourav Q.
Passed	TC-VPD-04: Verify product price is displayed correctly	Tested by sourav Q.
Failed	TC-VPD-03: Verify product description is displayed	Tested by sourav Q.

Failed	TC-VPD-02: Verify product name is displayed correctly	Tested by sourav Q.
Passed	TC-VPD-01: Verify user can open product details page	Tested by sourav Q.
Passed	TC06: Verify user can navigate to Fish category page	Tested by sourav Q.
Passed	TC05: Verify user can navigate to Dog category page	Tested by sourav Q.
Passed	Tc04: Verify user can navigate to Cat category page	Tested by sourav Q.
Passed	Tc03: Verify user can navigate to Reptile category page	Tested by sourav Q.
Passed	TC02: Verify user can navigate to Bird category page	Tested by sourav Q.
Passed	TC-1: Verify all pet categories are displayed on homepage	Tested by sourav Q.
